How do I find the IP address of a hosting package?

Site Management · https://computancy.co.uk/kb/how-do-i-find-the-ip-address-of-a-hosting-package/

If you're managing DNS elsewhere, or simply wish to know the IP address of a package, you can find this within your hosting control panel.

- Head to **Manage Hosting** and select **Manage** for the package you wish to know the IP address for
- Down the right-hand side under **Account Information** you'll find both the **IP Address** and the **IPv6 Address**
- In general it's only the IPv4 address you'll need
