How do I use the File Permissions Checker?

Site Management · https://computancy.co.uk/kb/how-do-i-use-the-file-permissions-checker/

The File Permissions Checker allows you to easily view and fix file permission issues which don't match our recommended settings.

To use the File Permissions Checker:

- Login to clients.computancy.uk, head to **Manage Hosting** and select **Manage** on the hosting package you wish to check file permissions for.
- Select the **File Permissions Checker** icon.
- To begin a scan of the file permissions, select **Scan Permissions**.
- If any permissions are found to differ from our recommended settings, they will be presented to you in a list with the current permission level and our recommend level.
- You can either select all files and select **Fix Selected** or fix files individually by selecting **Fix Permission.**
