What is the IP address that my site uses for external connections?

Site Management · https://computancy.co.uk/kb/what-is-the-ip-address-that-my-site-uses-for-external-connections/

Due to the distributed nature of our network, the IP address your site uses to make outbound connections will differ from the IP the domain resolves-to, and hence inbound traffic routes through.

External connections made by shared websites will appear as from either **185.151.28.62**, **185.151.28.63, 45.8.227.175 or 45.8.227.176**

If you have a Scheduled Tasks/Cron Job that requires external connections, these will appear from **185.151.28.61 or 45.8.227.174**

However, the above addresses are subject to change. So if possible, we'd recommend whitelisting the IP range **185.151.28.0/24 and 45.8.227.0/24.**
